

PROJECT PROFILE

Dr Chau Chak Wing Building

ABOUT THE PROJECT

Bent and Curved Glass contributed to the success of the iconic Frank Gehry designed Dr Chau Chak Wing Building which is the new home of UTS Business school in central Sydney.

In partnership with Lend Lease and Foxville Interiors BCG manufactured the curved glass elements forming the meeting room pods and dividing screens in the collaborative learning centre on level 7 of this highly acclaimed and recognised building.

The Pods are a key element in this multi-purpose and interactive area which reflects and reinforces the ethos of the building design. They facilitate engagement and both formal and informal communication to enhance the “cross-pollination of ideas among and between disciplines, researchers, industry and practitioners”.

The curved nature of the interior design creates a dynamic space consistent with the exciting and complex geometry of the building exterior as a whole and it's key elements.

Dr Chau Chak Wing Building

GLASS DESCRIPTION

12.76mm clear laminated curved glass fixed and sliding panels.

ARCHITECT

Frank Gehry

INSTALLER

Foxville Projects
